Abstract of the Disclosure

The invention relates to a liquid-crystalline medium of positive dielectric anisotropy, characterised in that it comprises in each case one or more compounds of the general formulae I, II and IV

$$R^{1} \xrightarrow{H} \xrightarrow{H} \xrightarrow{O} \xrightarrow{F} X^{1}$$

$$R^{2} \xrightarrow{H} \xrightarrow{O} \xrightarrow{O} X^{2}$$

$$R^{4} \xrightarrow{H} \xrightarrow{H} \xrightarrow{H} \xrightarrow{H} \xrightarrow{O} X^{4}$$

$$|V|$$

in which the parameters are as defined in the text, and to the use thereof as a constituent of a multibottle system and in electro-optical displays, and to multibottle systems of this type and displays which contain this medium.
